1952 No. 1

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 5th JANUARY, 1952

Crown Copyright Reserved.

LONDON: HIS MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included.*

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirth, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate †

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

Week ended:—	Oct. 27	Nov. 3	Nov. 10	Nov. 17	Nov. 24	Dec. 1	Dec. 8	Dec. 15	Dec. 22	Dec. 29	Jan. 5	Totals from 1st Week of year, in Great Towns *ONLY* 1952.	1951.	1950.

* Including influenzal pneumonia.

† The figures for the individual weeks up to and including Dec. 29th relate to 126 Great Towns. As from this week the figures relate to 160 Great Towns (representing about 10 per cent. more population). The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 5th January, 1952.

Great Towns, Greater London and four Scottish and Irish Towns.

(*See notes on page 2*).

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 5th January, 1952, with totals from the first week of the year to date. } **London.**

(*See notes on page* 2).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 5th January, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page 2*).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

* See Note 3.

† Two week period. The local offices of the Ministry of National Insurance were closed during the weeks ended 25th December and 1st January, for one or more days.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of " employed persons " under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Fine with frost early, becoming fair with slight to intermittent rain and drizzle in morning. Cloudy to fair in afternoon; fine late. Gusts more than 38 m.p.h.—12.10, 40, 45, 50h. (W). Frost in morning and dew in evening.

Monday—Fair early; cloudy rest of day. Mist and fog in morning and afternoon; slight rain late afternoon and early evening. Dew in morning. Slight showers late.

Tuesday—Cloudy early with slight showers; fair, becoming fine during day; cloudy with slight, moderate and heavy rain in evening. Fresh W—SW winds 02h.—07.30h., 10.15h.—15.30h., 18.15h.—24h.

Wednesday—Cloudy, with slight moderate and heavy rain early; fair to cloudy during day with showers; fair late. Gusts more than 38 m.p.h.:—01.30h.—02.10h. (W).

Thursday—Fair to cloudy early, fine during day; fair to cloudy in evening with slight shower; fine late. Frost morning and evening.

Friday—Fine until mid-morning, then fair becoming cloudy for rest of day. Continuous moderate to heavy rain, light at times, from late afternoon to end of day. Fresh SSW winds 19.35—55h.

Saturday—Cloudy most of day, except for fair to fine period around mid-day; fair late. Light to moderate rain early. Haze late afternoon and early evening, fog in evening. Fresh WNW—NNW winds 00.10—35h., 04h.—05.25h.

The reading of the barometer fell from 1016.1 mbs. at beginning of week to 992.5 mbs. at 22.15h. on 2nd, rose to 1023.4 mbs. at 09.50h. on 4th, fell to 1010.5 mbs. at 21.45h. on 4th, and rose to 1031.9 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12. 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London. (b) Great Towns in the aggregate †**

(*See notes on page* 2).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

Week ended:—	Nov. 3	Nov 10	Nov. 17	Nov. 24	Dec. 1	Dec. 8	Dec. 15	Dec. 22	Dec. 29	Jan. 5	Jan. 12	Totals from 1st Week of year, in Great Towns *ONLY* 1952.	1951.	1950.

* Including influenzal pneumonia.

† The figures for the individual weeks up to and including Dec. 29th relate to 126 Great Towns. As from Jan. 5th 1952, the figures relate to 160 Great Towns (representing about 10 per cent. more population). The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 12th January, 1952. } **Great Towns, Greater London and four Scottish and Irish Towns.**

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 12th January, 1952, with totals from the first week of the year to date. } **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 12th January, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(See notes on page 2).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

* See Note 3.

† Two week period. The local offices of the Ministry of National Insurance were closed during the weeks ended 25th December and 1st January, for one or more days.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Fair early, then cloudy all day. Intermittent light drizzle morning, afternoon and evening. Fog and fro early; mist from morning until mid-evening.

Monday—Generally cloudy, but fair around 15h. Intermittent slight drizzle early and during morning.

Tuesday—Cloudy. Intermittent slight drizzle early; with rain in afternoon and evening. Continuous light to moderat rain late; heavy 21.50h.—22h., 23.25h. Gusts more than 38 m.p.h.:—18.55h., 22.20h., 20.55h. (SW).

Wednesday—Cloudy early; fine around 06h. and in evening; fair rest of day. Intermittent light drizzle and rain earl becoming moderate to heavy. Heavy sleet shower and moderate shower late. Gusts more than 38 m.p.h.:—09.45 13.30, 45—50h., 18.30—40h., 21.05h, 21.15 (WSW—W).

Thursday—Cloudy. Light rain early and in afternoon; moderate to heavy 13.55h. Intermittent light rain in evenin Gusts more than 38 m.p.h.:—18.30h., 19.05, 20, 30, 40h., 20.30h., 21.45h. (W).

Friday—Cloudy morning and early evening; fair afternoon and late evening. Light rain early; intermittent in morni with slight shower. Fresh W—NW winds early and during morning. Gust more than 38 m.p.h.:—00.20h. (W).

Saturday—Fine most of day, becoming cloudy in afternoon and fair to fine in evening. Frost in morning; frost a mist in evening.

The reading of the barometer rose from 1031.9 mbs. at beginning of week to 1036.9 mbs. at 10.55h. on 7th, and f to 986.3 mbs. at 01.00h. on 11th, and rose to 1017.5 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of t barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in colum 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values deriv from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years end 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bri sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum a mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

BIRTHS AND DEATHS registered in the Quarter ended 31st December, 1951, and in the year 1951, with comparative figures for three earlier years. (The customary analysis will appear in the Quarterly Return in due course).

† The figures for the individual weeks up to and including Dec. 29th relate to 126 Great Towns. As from Jan. 5th 1952, the figures relate to 160 Great Towns (representing about 10 per cent. more population). The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 19th January, 1952. } Great Towns, Greater London and four Scottish and Irish Towns.

(*See notes on page 2*).

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 19th January, 1952, with totals from the first week of the year to date. } **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 19th January, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page 2*).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Week ended:—												
Jan. 15	13,400	1,900	2,100	1,700	1,400	1,200	500	1,000	900	400	500	1,600

* See Note 3.

† Two week period. The local offices of the Ministry of National Insurance were closed during the weeks ended 25th December and 1st January, for one or more days.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Cloudy early and in morning, becoming fair by mid-day, then cloudy. Light to moderate rain in evenings; heavy early evening and at 23.15h. Gusts more than 38 m.p.h.:—21.45h., 22h.—22.05, 30h. (SW). Frost in morning.

Monday—Cloudy early, becoming fine by 06h., then fair to cloudy rest of day. Intermittent light rain early; mist late afternoon. Fresh SW winds 21.50h.—22.05h., 23.40—50h. Frost in morning and dew in evening.

Tuesday—Cloudy, becoming fair in afternoon and fine in evening. Fresh winds 00.45h.—01.15h. (SSW), 02.50h.—03.50h., 04.20h.—08.40h. (SW), 11.25h.—15.15h. (WSW).

Wednesday—Cloudy in early morning, at mid-day, and early evening, otherwise fine to fair. Light to moderate early; heavy intermittently. Fresh winds 04.15h. (WSW), 04.45h.—05.35h. (W—WNW). Frost in evening.

Thursday—Cloudy early morning and afternoon, otherwise mainly fine. Heavy and moderate showers early; slight hail and sleet shower in afternoon, and rain shower. Fresh SW—W winds most of day. Gust more than 38 m.p.h.:—04.45h. (WSW).

Friday—Fair, becoming cloudy until early afternoon, then fair to fine. Snow shower at 06h. Fresh NW—NNW winds 00h.—21h. Gusts more than 38 m.p.h. intermittently during morning and afternoon.

Saturday—Fine early, becoming cloudy in morning and afternoon; fair to fine in evening. Slight snow early morning. Fresh WNW—N winds morning and afternoon. Gust more than 38 m.p.h.:—08.30h. (NNW).

The reading of the barometer rose from 1017.5 mbs. at beginning of week to 1022.7 mbs. at 10.00h. on 13th, fell to 1009.6 mbs. at 22.45h. on 13th, rose to 1023.0 mbs. at 18.10h. on 14th, fell to 991.6 mbs. at 13h. on 17th, and then rose to 1025.3 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Estimates of Births.

(a) Final estimate of live births to be expected in the quarter ending **31st March, 1952** **173,000**

(b) Provisional estimate of live births to be expected in the quarter ending **30th June, 1952** **174,000**

In the above estimates regard has been had to (1) sample returns of the number of special ration books issued to expectant mothers by the Ministry of Food, and (2) the recent trend of registered live births. The sample comprises some 200 Food Office areas containing about 25 per cent. of the population.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London. (b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

† The figures for the individual weeks up to and including Dec. 29th relate to 126 Great Towns. As from Jan. 5th 1952, the figures relate to 160 Great Towns (representing about 10 per cent. more population). The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 26th January, 1952. } **Great Towns, Greater London and four Scottish and Irish Towns.**

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 26th January, 1952, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 26th January, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. † Two week period. The local offices of the Ministry of National Insurance were closed during the weeks ended 25th December and 1st January, for one or more days.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VII.—Air Temperature, Rainfall and Sunshine in the week ended 26th January, 1952. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

Daily Notes

Sunday—Fine at first, then generally cloudy except for fair period around mid-day. Slight snow and sleet showers in evening; fog morning and early afternoon. Frost in morning. Fresh NNE winds:—14.05—20, 50h.,—15h., 17.30h.—20h., 21h.—21.30h.

Monday—Cloudy all day. Intermittent slight rain in afternoon. Fresh NE winds—04.55h., 06.50h.—12.25h., 13h.—13.30h., 14.25h.—15.15h., 17.20h.—18.20h.

Tuesday—Cloudy all day. Intermittent slight rain in afternoon. Mist in morning; fog from mid-morning until end of day. Frost in evening.

Wednesday—Cloudy all day. Periods of intermittent light drizzle and rain from morning until early evening. Fog early; mist until mid-evening. Frost in morning.

Thursday—Cloudy. Light rain and drizzle from morning until mid-evening becoming sleet, then light snow. Fog from morning until late afternoon; thick 16.40h.—17h. Day darkness from S at 11.15—35h.

Friday—Cloudy early and late; cloudy to fair rest of day except for fine period at 09h. Fog in morning; mist afternoon and evening. Frost in morning.

Saturday—Cloudy early becoming fair in morning and afternoon; fine in evening. Continuous slight snow early morning. Mist early morning and late evening. Frost in evening.

The reading of the barometer fell from 1025.3 mbs. at beginning of week to 1021.3 mbs. at 17.45h. on 20th, rose to 1030.8 mbs. at 18.50h. on 21st, fell to 995.7 mbs. at 05.15h. on 26th, and then rose to 1000.3 mbs. by end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ending 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 2nd FEBRUARY, 1952

Crown Copyright Reserved.

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946. i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually: those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Smallpox

There were no deaths from smallpox registered during the month of December.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. — **(a) London. (b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

† The figures for the individual weeks up to and including Dec. 29th relate to 126 Great Towns. As from Jan. 5th, 1952, the figures relate to 160 Great Towns (representing about 10 per cent. more population). The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 2nd February, 1952. — **Great Towns, Greater London and four Scottish and Irish Towns.**

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 2nd February, 1952, with totals from the first week of the year to date. } **London.**

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Fine most of day except for short fair period in afternoon. Mist most of day except for short periods ea morning and afternoon. Frost morning and evening.

Monday—Fair early and fine late; cloudy during day. Intermittent light rain in morning, light to moderate in aft noon, heavy 14.40—45h. Frost morning and evening.

Tuesday—Fine in morning and late evening; fair afternoon and early evening. Mist late afternoon; fog in evenin Frost in morning.

Wednesday—Fine early; sky becoming overcast with fog in morning, fine in afternoon, becoming cloudy in eveni Fog until early afternoon; thick 05.30h.—12.15h. Frost in morning and mist in evening. Fresh S winds 20.20—30 21.40h.—24h.

Thursday—Cloudy at first, then fair to cloudy; fine in evening. Light to moderate rain early, heavy at times. Lig shower of rain and snow in afternoon; moderate sleet shower 14.30h. with hail and squall (NW). Fresh to strong winds mo of day.

Friday—Fine early, becoming generally cloudy; fine in evening. Light to moderate rain and sleet in morning; int mittent light rain by mid-day; heavy rain 11.15h. Mist in morning and frost in evening.

Saturday—Fine most of day except for fair period around 15h. Fog in evening. Frost morning and evening.

The reading of the barometer rose from 1000.3 mbs. at beginning of week to 1008.3 mbs. at 24h. on 27th, fell 996.6 mbs. at 16.45h. on 28th, rose to 1015.3 mbs. at 09.35h. on 30th, fell to 981.1 mbs. at 06.30h. on 31st and rose 999.7 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in colu 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values deri from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years end 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bri sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum a mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S
WEEKLY RETURN FOR
ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 9th FEBRUARY, 1952

Crown Copyright Reserved.

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946. i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review. Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.‖

* Including influenzal pneumonia.

† The figures for the individual weeks up to and including Dec. 29th relate to 126 Great Towns. As from Jan. 5th, 1952, the figures relate to 160 Great Towns (representing about 10 per cent. more population). The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 9th February, 1952. } **Great Towns, Greater London and four Scottish and Irish Towns.**

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 9th February, 1952, with totals from the first week of the year to date. } **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 9th February, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

Daily Notes

Sunday—Fine to fair in morning, cloudy for time in afternoon; fine in evening. Moderate sleet shower and slight rain shower late evening. Frost morning and evening; mist late afternoon and evening.

Monday—Fine early and late, otherwise fair except for cloudy period around 09h. Frost morning and evening.

Tuesday—Fine until mid-day, then fair, becoming cloudy from mid-afternoon. Fog during morning until mid-day and in late afternoon and evening. Frost in morning.

Wednesday—Cloudy all day. Intermittent slight rain in afternoon.

Thursday—Cloudy at first, becoming fine to fair in morning; cloudy from mid-day. Fog for short period in morning. Intermittent light drizzle and rain late evening. Frost in morning.

Friday—Cloudy at first, becoming fine in morning; generally cloudy from mid-day except fair to fine period early evening. Moderate to heavy shower early and slight snow shower. Frost in morning and fresh WNW-NNW winds.

Saturday—Cloudy at first; fine in morning and early afternoon, then cloudy, becoming fair to fine in evening, with fog. Fresh N—NNW winds in morning. Frost morning and evening.

The reading of the barometer rose from 999.7 mbs. at beginning of week to 1041.1 mbs. at 11.25h. on 5th, fell to 1011.7 mbs. at 03.30h. on 8th, and rose to 1020.0 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

Crown Copyright Reserved.

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—The figures in this Return are provisional. Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Quarterly
(a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).
(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual
Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

† The figures for the individual weeks up to and including Dec. 29th relate to 126 Great Towns. As from Jan. 5th, 1952, the figures relate to 160 Great Towns (representing about 10 per cent. more population). The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 16th February, 1952. } **Great Towns, Greater London and four Scottish and Irish Towns.**

(*See notes on page 2*).

TOWNS	Live Births.	Stillbirths.	Deaths (excluding Stillbirths).	Deaths of Infants under 1 year of Age.	Deaths from Typhoid and Paratyphoid fevers.	Whooping cough.	Diphtheria.	Tuberculosis (all forms).	Influenza. §	Acute poliomyelitis.	Pneumonia.	Enteritis and diarrhoea under 2 years.	Dysentery.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 16th February, 1952, with totals from the first week of the year to date. } **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 16th February, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page 2*).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	A Cholera.	B Plague.	D Meningococcal infection	E Paralytic	F Non-paralytic	Acute poliomyelitis	G Infective	K Post Infectious	Acute encephalitis	H Typhus fever.	I Relapsing fever.	J Continued fever. (London only).	L Dysentery.	M Ophthalmia neonatorum.	N Puerperal pyrexia and Puerperal fever.	C	O Smallpox.	P Paratyphoid fever.	R Typhoid fever.	S Food poisoning

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under National Insurance Act for sickness benefit without limit of income, including not only those empl under contract of service but also the self-employed. Only comparatively small sections of the wo population are excluded, the most numerous being those employed married women who elect n be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians wo for an employer under contract of service or apprenticeship, corresponding closely with the cla "employed persons" under the main scheme.

Daily Notes

Sunday—Fine to fair early; cloudy most of day. Light to moderate rain and drizzle afternoon and evening; interm at times. Fresh WSW winds 13.50h., 16.15—20h., 20.30h—21h., 21.35h.—23.30h. Frost in morning.

Monday—Cloudy, becoming fair in evening. Light to moderate rain until 14.45h.; heavy 06.05—25h. and interm at times. Mist in morning until late evening; gloom 14.15h. Fresh WSW wind 01.50—55h.

Tuesday—Fair to fine most of day except for cloudy period at 15h.; cloudy in late evening. Haze late after fog from mid-evening becoming mist late. Frost morning and evening.

Wednesday—Cloudy until mid-morning, then fair to fine; cloudy for period in afternoon, fair in evening. snow early morning, with mist; haze and mist in evening, with frost.

Thursday—Cloudy. Light to moderate snow in morning, heavy 07.45h., turning to intermittent light rain and agg evening. Fog morning and afternoon and early evening. Fresh NNE wind 22h.—22.10h. Frost in morning.

Friday—Cloudy early, becoming fine; cloudy to fair most of day, fine late. Fog in evening. Frost mornin evening.

Saturday—Fine early until 06h., then cloudy. Intermittent light drizzle late afternoon and early evening. early, in morning and afternoon; mist early and in afternoon.

The reading of the barometer fell from 1020.0 mbs. at beginning of week to 998.4 mbs. at 06.25h. on 11th, r 1013.3 mbs. at 18h. on 12th, fell to 997.9 mbs. at 14h. on 14th, and then rose to 1026.8 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cisterm barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in c 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimu mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951: "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review. Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.

Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

† The figures for the individual weeks up to and including Dec. 29th relate to 126 Great Towns. As from Jan. 5th, 1952, the figures relate to 160 Great Towns (representing about 10 per cent. more population). The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 23rd February, 1952.

Great Towns, Greater London and four Scottish and Irish Towns.

(*See notes on page 2*).

TOWNS	Live Births.	Stillbirths.	Deaths (excluding Stillbirths).	Deaths of Infants under 1 year of Age.	Deaths from Typhoid and Paratyphoid fevers.	Whooping cough.	Diphtheria.	Tuberculosis (all forms).	Influenza. §	Acute poliomyelitis.	Pneumonia.	Enteritis and diarrhoea under 2 years.	Dysentery.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 23rd February, 1952, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 23rd February, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page 2*).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

Daily Notes

Sunday—Cloudy. Intermittent light drizzle around 06h., continuous light to moderate rain morning and afternoon heavy 09.15h, 16.15h. Fog morning and afternoon; mist early and around mid-day. Fresh N—NNE winds in evening.

Monday—Cloudy. Intermittent light drizzle in morning; light to moderate in evening, becoming intermittent. [illegible] late afternoon; fog in evening. Fresh NNE winds 00.45—50h., 01.10h.—01.40h.

Tuesday—Cloudy. Intermittent light drizzle early with light to moderate rain, becoming intermittent during morning and at mid-day. Light drizzle most of evening; moderate rain 18.30h. Mist morning and evening.

Wednesday—Cloudy early, becoming fine until mid-evening, then fair to cloudy. Fog in morning; haze afternoon and evening.

Thursday—Cloudy, except for a short period at mid-day, when fair.

Friday—Cloudy all day.

Saturday—Cloudy to fair until mid-morning, then fine, becoming cloudy late. Mist in morning; haze and fog evening. Frost in morning, dew in evening.

The reading of the barometer fell from 1026.8 mbs. at beginning of week to 1018.4 mbs. at 15.15h. on 17th, rose 1031.5 mbs. at 11h. on 21st, fell to 1025.0 mbs. at 15.20h. on 23rd, then rose to 1027.1 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years end 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bri sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 1st MARCH, 1952

Crown Copyright Reserved.

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

BLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page* 2).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

† The figures for the individual weeks up to and including Dec. 29th relate to 126 Great Towns. As from Jan. 5th, 1952, the figures relate to 160 Great Towns (representing about 10 per cent. more population). The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

ABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 1st March, 1952. } **Great Towns, Greater London and four Scottish and Irish Towns.**

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate (e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 1st March, 1952, 1952, with totals from the first week of the year to date. **London.**

(See notes on page 2).

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1952	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—under 1 year.	1-4 years.	5-14 years.	15-24 years.	25-34 years.	35-44 years.	45-54 years.	55-64 years	65-74 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 1st March, 1952. | **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page 2*).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute polio-myelitis: Paralytic E	Acute polio-myelitis: Non-paralytic F	Acute encepha-litis: Infective G	Acute encepha-litis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

Daily Notes

Sunday—Cloudy at first, then fine most of day except for cloudy period in morning. Fog most of day except misty period in afternoon. Shallow fog for time in morning and around 21h.

Monday—Fine at first, then sky obscured by fog by 06h.; fair in morning, then generally cloudy rest of day. persisting until late morning; haze and fog late afternoon and evening; mist late. Partial eclipse of sun 08.45h.—09

Tuesday—Cloudy, becoming fair to fine in evening. Mist early, fog in late morning and afternoon, with haze at t and fog again late afternoon and evening. Mist for short time in evening.

Wednesday—Fine in morning; sky obscured by fog around mid-day, becoming cloudy with mist in evening. persisting most of day. Frost in morning.

Thursday—Cloudy at first, then sky obscured by fog until mid-morning, then generally fine except for cloudy po in afternoon. Fog until mid-day; mist late afternoon and evening; dew morning and evening.

Friday—Fine to fair early, then cloudy rest of day. Mist in morning; haze and fog in evening; dew mornings evening.

Saturday—Cloudy at first, becoming fine, then sky obscured by fog around 09h.; fair to cloudy rest of day fair late. Fog persisted until late morning, thick 00h.—10h.; dew in evening.

The reading of the barometer rose from 1027.1 mbs. at beginning of week to 1033.0 mbs. at 20.40h. on 25th, fe 1030.3 mbs. at 16.00h. on 26th, rose to 1032.3 mbs. at 09.20h. on 28th, and fell to 1015.9 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern c barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in co 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values de from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years e 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of b sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.

Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

† The figures for the individual weeks up to and including Dec. 29th relate to 126 Great Towns. As from Jan. 5th, 1952, the figures relate to 160 Great Towns (representing about 10 per cent. more population). The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 8th March, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1952	Deaths registered during current week: All Ages.	Under 4 weeks.	4 weeks—under 1 year.	1-4 years.	5-14 years.	15-24 years.	25-34 years.	35-44 years.	45-54 years.	55-64 years.	65-74 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 8th March, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. * See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under th National Insurance Act for sickness benefit without limit of income, including not only those employe under contract of service but also the self-employed. Only comparatively small sections of the workin population are excluded, the most numerous being those employed married women who elect not be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians workin for an employer under contract of service or apprenticeship, corresponding closely with the class " employed persons " under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when th average is for periods of five weeks.

Daily Notes

Sunday—Fair early, then cloudy rest of day. Fresh SW winds 12.10—40h., 15.15h.—16h., 16.50h., 17.30—40h. Frost in morning and dew in evening.

Monday—Cloudy most of day. Light showers afternoon and evening; moderate to heavy shower early evening and a 20.20h. Fresh SSW winds morning and afternoon.

Tuesday—Cloudy most of day with fair period in late afternoon. Continuous light rain in morning, becoming intermittent. Light showers at mid-day and in afternoon and evening. Light to moderate rain in evening, heavy at 22.40—50h. and 23h.

Wednesday—Cloudy, becoming fair in afternoon and fine in evening. Heavy shower early with squall. Light showe and rain in morning; heavy shower 18.55h.; haze in evening. Fresh to strong winds early; gust more than 38 m.p.h.:— 03.40 (SSW).

Thursday—Cloudy. Continuous light to moderate rain from morning until end of day except for short periods in morning and afternoon when intermittent. Dew and frost early.

Friday—Cloudy. Intermittent light rain and drizzle early; continuous moderate to heavy until mid-day; intermitten light afternoon and evening with moderate and heavy for time in afternoon.

Saturday—Cloudy until mid-day, fair in afternoon, cloudy again by evening. Light rain and drizzle in morning moderate to heavy around 10h.

The reading of the barometer fell from 1015.9 mbs. at beginning of week to 996.3 mbs. at 03.25h. on 5th, rose to 1015.5 mbs. at 09h. on 6th, fell to 1008.0 mbs. at 16.10h. on 7th, and rose to 1011.9 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946. i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included.*

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review. Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 15th March, 1952. } **Great Towns, Greater London and four Scottish and Irish Towns.**

(*See notes on page 2*).

TOWNS	Live Births.	Stillbirths.	Deaths (excluding Stillbirths).	Deaths of Infants under 1 year of Age.	Deaths from: Typhoid and Paratyphoid fevers.	Whooping cough.	Diphtheria.	Tuberculosis (all forms).	Influenza. §	Acute poliomyelitis.	Pneumonia.	Enteritis and diarrhoea under 2 years.	Dysentery.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 15th March, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 15th March, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page 2*).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. * See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of " employed persons " under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Cloudy, becoming fair in evening. Light and heavy shower early; continuous moderate to heavy rain morning, becoming intermittent slight; slight rain and drizzle in afternoon. Mist during morning.

Monday—Cloudy in morning, fair periods in afternoon; cloudy to fair becoming fine in evening. Haze late afternoo and early evening, becoming shallow fog and fog late. Dew morning and evening.

Tuesday—Fine early, sky obscured by fog in morning then fair to fine except for cloudy period late afternoon an early evening. Thick fog 03h.—10.20h.; haze and mist late afternoon and evening with fog for short period.

Wednesday—Fine at first becoming fair to cloudy in morning; fair to fine in afternoon and cloudy in evening, wit haze and mist. Dew in morning.

Thursday—Cloudy all day.

Friday—Cloudy at first, becoming fair to fine morning and early afternoon. Fair late afternoon and early evenin then fine with haze. Light shower early. Fresh ESE—SE winds 10.05—35h., 11.30—45h., 15.05h.

Saturday—Fine until around mid-day, becoming cloudy in afternoon and early evening, then fair. Haze in evenin Frost in morning.

The reading of the barometer fell from 1011.9 mbs. at beginning of week to 1007.6 mbs. at 11.50h. on 9th, rose 1024.0 mbs. at 23.00h. on 13th, and fell to 1006.7 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of t barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in colum 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values deriv from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years end 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bri sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum a mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

THE REGISTRAR GENERAL'S
WEEKLY RETURN FOR
ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 22nd MARCH, 1952

Crown Copyright Reserved.

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review. Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.

Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 22nd March, 1952.

Great Towns, Greater London and four Scottish and Irish Towns.

(*See notes on page 2*).

TOWNS	Live Births.	Stillbirths.	Deaths (excluding Stillbirths).	Deaths of Infants under 1 year of Age.	Deaths from Typhoid and Paratyphoid fevers.	Whooping cough.	Diphtheria.	Tuberculosis (all forms).	Influenza. §	Acute poliomyelitis.	Pneumonia.	Enteritis and diarrhoea under 2 years.	Dysentery.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 22nd March, 1952, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 22nd March, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

(b) New claims to injury benefit.												
Week ended:—												
Mar. 18	13,900	2,200	2,100	1,700	1,500	1,300	500	1,100	900	400	500	1,80

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VII.—Air Temperature, Rainfall and Sunshine in the week ended 22nd March, 1952. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

Daily Notes

Sunday—Fair at first, then generally cloudy. Light to moderate rain early, heavy at 03.25—35h., and 05.35h. Light shower at mid-day.

Monday—Generally cloudy becoming fair in evening. Light and moderate shower early, light shower in afternoon, and moderate shower in evening, with mist and dew late.

Tuesday—Fair early, then cloudy rest of day. Heavy shower 12.15h. and light shower in afternoon. Fog in morning; gloom to SE 12.15—30h. Haze and mist in evening, with fog for short while.

Wednesday—Fine early, sky obscured by fog around 06h., then generally cloudy. Intermittent light drizzle in morning. Fog during morning and from mid-day until mid-evening. Dew morning and evening.

Thursday—Cloudy most of day with fair period afternoon and early evening. Light to moderate rain and intermittent light drizzle early. Fresh W—WNW winds:—10.45h., 14.25—50h., 15.05h., 15.40—50h.

Friday—Cloudy most of day except for short fair period in morning. Light to moderate rain in evening, becoming intermittent. Fresh SW winds:—19.30h., 20.10—35h., 21.45h. Dew in morning; solar halo 09.25h.

Saturday—Generally cloudy in morning; fair afternoon and evening. Intermittent light rain in morning and at mid-day; showers during morning. Fresh SW—W winds until mid-day veering to NW during afternoon. Gust more than 38 m.p.h.:—09.40h. (W).

The reading of the barometer rose from 1006.7 mbs. at beginning of week to 1018.1 mbs. at 08.50h. on 19th, fell to 1008.1 mbs. at 08.50h. on 20th, rose to 1017.2 mbs. at 11.50h. on 21st, fell to 1005.4 mbs. at 08h. on 22nd, and then rose to 1015.8 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 29th MARCH, 1952

Crown Copyright Reserved.

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those ***registered*** in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.

Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(See notes on page 2).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 29th March, 1952, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 29th March, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VII.—Air Temperature, Rainfall and Sunshine in the week ended 29th March, 1952. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

Daily Notes

Sunday—Cloudy. Continuous light to moderate rain late afternoon and evening; heavy 21.05, 21.50h., 22.20—55 Frost early.

Monday—Cloudy most of day, becoming fair in evening. Continuous light to moderate rain and drizzle until mid-da and moderate shower in evening. Mist in morning.

Tuesday—Fair at first, becoming generally cloudy; fair again in evening. Intermittent light drizzle and rain ea moderate to heavy during morning. Light rain and drizzle at mid-day; light hail shower 14.55h. Fresh N winds:—1 16.25h.—17.10h.

Wednesday—Fair to fine at first, becoming fair in morning until mid-day, then cloudy. Light showers in afterno intermittent light rain in evening. Haze late afternoon and early evening. Dew in morning.

Thursday—Cloudy at first; fair to fine during morning, and generally cloudy during afternoon and evening. L snow showers in late afternoon. Fresh NNE—NE winds :—17.30h.—19.30h., 20h.—20.30h., 20.45h.—23.20h., 23.50h. F in morning.

Friday—Cloudy most of day. Light to moderate snow showers morning and early afternoon; mist at mid-d Fresh to strong NE—ENE winds most of day. Gusts more than 38 m.p.h.:—10.30h., 13h.—17.50h., 19.10h.—20.33 22h.—23.40h. (ENE).

Saturday—Cloudy; overcast for time in morning. Continuous light to moderate snow morning and afternoon, in mittent in evening; light to moderate continuous again late. Fog morning and afternoon. Fresh to strong ENE winds n of day. Gusts more than 38 m.p.h.:—0.0h.—14h., 14.55h.—16.15h., 16.50h.—21.15h., 21.55h.—22.15h.

The reading of the barometer fell from 1015.8 mbs. at beginning of week to 1004.5 mbs. at 00.30h. on 25th, ros 1018.4 mbs. at 11.30h. on 26th, fell to 990.8 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in col 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values der from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years en 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of br sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review. Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review. Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.

Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

ABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 5th April, 1952.

Great Towns, Greater London and four Scottish and Irish Towns.

(*See notes on page 2*).

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 5th April, 1952, with totals from the first week of the year to date. } **London.**

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VII.—Air Temperature, Rainfall and Sunshine in the week ended 5th April, 1952. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

Daily Notes

Sunday—Cloudy. Continuous light to moderate snow early; intermittent in morning. Light sleet in afternoon and early evening. Fresh wind 0.0h.—16.25h. (ENE—NE), 17.40h.—18h. (NE).

Monday—Cloudy, becoming fair to cloudy in morning and afternoon, fine to fair in evening. Intermittent light snow early, becoming continuous light to moderate. Intermittent light rain in evening; light sleet and light to moderate rain late. Fresh NE winds in morning.

Tuesday—Cloudy to fair most of day, becoming fine in evening.

Wednesday—Fine to fair early, then generally cloudy. Light showers in afternoon, and a light shower of sleet. Fresh wind 16.30—35h. (NNE).

Thursday—Generally cloudy, except for a time in early morning, when fair.

Friday—Generally cloudy. Fair for a time in afternoon and early evening.

Saturday—Cloudy becoming fair in morning, then cloudy until evening, when fair. Intermittent light rain in afternoon. Fresh wind 08.10h.—16.10h., 16.25h. (S). Gust more than 38 m.p.h.:—10.30h. (S).

The reading of the barometer rose from 990.8 mbs. at beginning of week to 1029.5 mbs. at 24h. on 3rd, and fell to 1011.0 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ending 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.

Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

ABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

ABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 12th April, 1952.

Great Towns, Greater London and four Scottish and Irish Towns.

(*See notes on page 2*).

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

** Return not received.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 12th April, 1952, with totals from the first week of the year to date. **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 12th April, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute polio-myelitis: Paralytic E	Acute polio-myelitis: Non-paralytic F	Acute enceph-alitis: Infective G	Acute enceph-alitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

Week ended:—												
April 8	13,300	2,000	2,100	1,500	1,400	1,200	500	1,000	800	400	500	1,70

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Cloudy. Light showers early; light to moderate rain, heavy at 08.35h., in morning. Light to moderate rain heavy at 15.05h., in afternoon and late evening. Gusts more than 38 m.p.h.:—08.30h., 09h., 09.40h.—10.10h. (S), 11.05h (SSW), 13.10h. (SW).

Monday—Generally cloudy. Continuous light to moderate rain, heavy at 01.45—50h., early. Light rain and drizzle i morning, a light shower in afternoon, and light rain late. Fresh SSW—W winds 01.10—14.10h. Gusts more than 38 m.p.h.:- 08.10h. (SSW), 10.50h.—11.45h. (SW).

Tuesday—Cloudy, becoming fair to fine in evening. Light to moderate rain early, heavy at 04.40.—05h., becomin light to moderate drizzle in morning. Fog in morning.

Wednesday—Fair, becoming cloudy. Fair again in morning and early afternoon, then cloudy rest of day. Inte mittent light drizzle and rain late. Fresh wind 13.50h.—16.35h. (S—SSE), 17.45h. (SSE), 18.20—50h. (S).

Thursday—Cloudy at first, fair at times in morning and early afternoon, then cloudy again. Light showers in morninn Continuous light to moderate rain in afternoon and evening, heavy at 17.20h., and 18.35h.—19h. Fresh wind 06.40h.—13 (S—SW). Gusts more than 38 m.p.h.:—08.55h., 09.10h., 09.30h., 09.45h. (SSW), 12.05h. (SW).

Friday—Cloudy, becoming fair in morning and early afternoon, then cloudy. Light rain early. Fresh wind 10.10h.- 10.35h. (SSW), 12.40h.—13.30h. (SW).

Saturday—Cloudy. Intermittent light rain and fog in evening. Fresh wind 11.25—11.45h. (E).

The reading of the barometer fell from 1011.0 mbs. at beginning of week to 1005.5 mbs. at 10.55h. on 6th, rose 1019.9 mbs. at 24h. on 7th, fell to 1004.4 mbs. at 04.35h. on 10th, and rose to 1018.3 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of t barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in colun 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values deriv from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years end 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of brig sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum a mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

BIRTHS AND DEATHS registered in the Quarter ended 31st March, 1952, with comparative figures for the first Quarters of three earlier years. (The customary analysis will appear in the Quarterly Return in due course).

First Quarter of:—	Live Births		Stillbirths		Deaths (including non-civilians)		Deaths of Infants under 1 year	
	Number	per 1,000 population	Number	per 1,000 total live and stillbirths	Number	per 1,000 population	Number	per 1,000 related live births
1952	**173,503**	**15·9**	**4,146**	**23·3**	**146,631**	**13·5**	**5,588**	**33·4**

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 19th April, 1952, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 19th April, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page 2*).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute polio-myelitis: Paralytic E	Acute polio-myelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Cloudy at first, then fair most of day and cloudy again in evening. Shallow mist early morning; dew morning and evening.

Monday—Cloudy at first, fine to fair until mid-day, then cloudy. Intermittent light to moderate rain late afternoon and evening, becoming continuous moderate to heavy. Mist and dew in morning; mist in evening.

Tuesday—Cloudy all day with dew in evening.

Wednesday—Cloudy at first becoming fair, then fine after mid-day. Continuous heavy rain early morning becoming moderate to light. Mist in morning. Fresh ENE wind 18.30—40h., 19.30—35h., 20.20—55h.

Thursday—Fine all day; dew early.

Friday—Fine all day, with dew morning and evening.

Saturday—Fine most of day except for fair period around mid-day; fair to cloudy late, with light rain. Dew in morning.

The reading of the barometer rose to 1024.6 mbs. at 02.00h. on 14th, fell to 1019.6 mbs. at 16.50h. on 14th, rose to 1024.9 mbs. at 08.10h. on 18th, fell to 1012.8 mbs. at 17.45h. on 19th, and rose to 1013.7 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S
WEEKLY RETURN FOR
ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 26th APRIL, 1952

Crown Copyright Reserved.

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and the other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available :—

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Neo-natal Mortality

The deaths of infants under 4 weeks during 1951 numbered 12,783, representing a provisional rate of 18·8 per 1,000 related live births.

Death Rates from Tuberculosis and Cancer and Maternal Mortality—1951

Provisional death rates per million population for England and Wales during the year 1951 are as follows :—

	Males.	*Females.*	*Persons.*
Respiratory Tuberculosis	376	181	275
Other Tuberculosis	44	37	41
Cancer of lung and bronchus	530	91	302
Other Cancer	1,585	1,731	1,660

The maternal mortality (provisional) per 1,000 total live and still births based on deaths primarily classed to diseases of pregnancy, childbirth and the puerperal state as arranged in the Manual of the International List (6th revision) is a follows:—

Intermediate List No. and cause.	
A115—Sepsis of pregnancy, childbirth and the puerperium	0·10
A116 { Abortion with toxæmia	0·00
A116 { Other toxæmias of pregnancy and the puerperium	0·24
A117—Hæmorrhage of pregnancy and childbirth	0·13
A118—Abortion without mention of sepsis or toxæmia	0·05
A119—Abortion with sepsis	0·09
A120—Other complications of pregnancy, childbirth and the puerperium	0·18

TABLE I.—Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 26th April, 1952, with totals from the first week of the year to date. } **London.**

* The Abbreviated List numbers are those set out on pages 361-2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 26th April, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note:—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute polio-myelitis: Paralytic E	Acute polio-myelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

Weekly Averages:-												
1951 Apr.	110,600	9,400	11,500	19,200	8,500	11,000	6,200	15,100	10,600	4,700	6,500	7,9
*1952 Mar.	130,700	9,800	14,700	24,100	10,200	12,700	7,100	17,700	12,500	5,600	7,600	8,3
*1951 Mar.	123,800	10,000	13,000	20,900	9,800	12,400	7,100	17,000	12,000	5,600	7,300	8,4
(b) New claims to injury benefit.												
Week ended:—												
April 22	12,200	1,800	1,800	1,500	1,300	1,100	400	1,000	800	400	500	1,

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VII.—Air Temperature, Rainfall and Sunshine in the week ended 26th April, 1952. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

Daily Notes

Sunday—Cloudy, becoming fair until mid-morning, then generally cloudy; fair late evening. Light to moderate ra[illegible] early.

Monday—Cloudy. Continuous light to moderate rain in morning, heavy 06.55h.—07.05h., 07.15—20h., 12.05—10h. Lig[illegible] to moderate rain and drizzle in afternoon, heavy 13.15h. Fresh S—SW winds 10h.—24h. Gusts more than 38 m.p.h.: 17.50—55h., 18.05—15, 30, 45h., 19.10h., 20.10h.—22.05h. (SW).

Tuesday—Cloudy most of day but short fair period in late afternoon and early evening. Light to moderate showe[illegible] most of day; heavy 10.04h., 11.50h. (squall), moderate hail 12.55h., 16.05h. Fresh SW-WSW winds until 15h. Gu[illegible] more than 38 m.p.h.:—00.10h.—01.10, 45h., 11.55h. (SW-W).

Wednesday—Cloudy to fair in morning, cloudy until mid-evening, then fair to fine. Light to moderate showers mid-de[illegible] to mid-evening. heavy 15.36h., 18.10h. Thunder heard 15.21, 25h. (NNW). Mist late and dew in morning.

Thursday—Fair to cloudy at first, becoming fair for period in morning, cloudy until mid-evening, fair to fine la[illegible] Light shower late morning; intermittent light rain around mid-day. Frost early.

Friday—Fine until late morning, then fair to cloudy; fair in evening. Haze and dew in evening.

Saturday—Fair to cloudy at first, becoming fine for period in morning, then cloudy; fair to fine in evening. Shall[illegible] fog in patches around 06h. Frost in morning and dew in evening.

The reading of the barometer fell from 1013.7 mbs. at beginning of week to 992.0 mbs. at 17.00h. on 21st, rose[illegible] 1028.8 mbs. at 23.30h. on 25th, and then fell to 1024.8 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of t[illegible] barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in colu[illegible] 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values der[illegible] from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years en[illegible] 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of br[illegible] sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum[illegible] mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Estimates of Births.

(a) Final estimate of live births to be expected in the quarter ending **30th June, 1952** **175,000**

(b) Provisional estimate of live births to be expected in the quarter ending **30th September, 1952** **172,000**

In the above estimates regard has been had to (1) sample returns of the number of special ration books issued to expectant mothers by the Ministry of Food, and (2) the recent trend of registered live births. The sample comprises some 200 Food Office areas containing about 25 per cent. of the population.

BLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

ABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 3rd May, 1952.

Great Towns, Greater London and four Scottish and Irish Towns.

(*See notes on page 2*).

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

** Return not received.

¶ Change of boundary, 1st April, 1952.

(b) New claims to injury benefit.												
Week ended:—												
April 29	13,400	2,000	2,100	1,500	1,500	1,300	500	1,000	800	400	500	1,700

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VII.—Air Temperature, Rainfall and Sunshine in the week ended 3rd May, 1952. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

Daily Notes

Sunday—Fine to fair until early afternoon, then cloudy for rest of day. Dew in morning.

Monday—Cloudy to fair most of day, becoming fine in evening. Dew morning and evening.

Tuesday—Fine at first, becoming fair to cloudy by mid-day; fair in afternoon, becoming fine in evening. Frost morning.

Wednesday—Fine, becoming fair in afternoon; cloudy in evening, with light to moderate rain, heavy at times. Fre winds 12.25h. (SSE), 19h. (SW). Dew early.

Thursday—Cloudy. Continuous light to moderate rain in morning, heavy at times. Moderate to heavy showers afternoon becoming light in evening. Thunder heard SE-SW in afternoon and with lightning in evening to SE.

Friday—Cloudy. Light to moderate rain early, heavy 02.45h.—03.05h. and 03.15h. Light showers in morning an early afternoon. Mist in morning.

Saturday—Cloudy. Continuous light to moderate rain early; intermittent light in morning, becoming continuou heavy 11.05—30h., moderate to light until 13.40h. Mist at mid-day and from late afternoon to end of day. Dew late evenin

The reading of the barometer fell from 1024.8 mbs. at beginning of week to 1003.3 mbs. at 15.00h. on 30th, rose 1009.8 mbs. at 21.00h. on 2nd, and fell to 997.3 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of t barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in colun 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values deriv from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years end 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of brig sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum minimum a mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Monthly Deaths from smallpox—about the fourth week following the month.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

** Return not received.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 10th May, 1952, with totals from the first week of the year to date. } **London.**

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

TABLE VII.—Air Temperature, Rainfall and Sunshine in the week ended 10th May, 1952. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

Daily Notes

Sunday—Cloudy. Heavy shower 09.55h.; light shower in morning. Continuous light to moderate rain, heavy at times from mid-day until late evening. Thunderstorm at mid-day, SE—SSW. Fog at 06h., mist at mid-day.

Monday—Cloudy, becoming fair in morning, cloudy to fair afternoon and evening with fine period early evening. Light rain early; moderate and heavy shower 12.10, 20h. Fresh SW—SSW winds 10.35—45h., 12.20h.—19.30h. Dew in morning.

Tuesday—Fair at first, then generally cloudy, and fair late. Light to moderate showers early; intermittent light rain late morning becoming continuous moderate to heavy 12.55h. and light until 13.45h. Moderate to heavy shower in evening.

Wednesday—Fair in morning and afternoon except for fine period at 06h., fine in early evening, becoming fair to cloudy later. Fresh SSW winds 08.25—40h., 09.30h.—10.10h., 10.35h.—15h. Dew in morning.

Thursday—Cloudy most of day. Heavy showers early; light rain in early morning becoming continuous moderate to heavy, then moderate to light. Light and moderate showers late afternoon with thunder and lightning to SE at 16.15h.

Friday—Cloudy at first becoming fine to fair until mid-afternoon; cloudy for short time, then fair to fine. Moderate shower early. Fresh SSW winds 11.30h.—13h., 15.15—45h. Dew morning and evening.

Saturday—Fair early, then cloudy. Light to moderate shower early morning. Fresh SSW—S winds 08.30—40h., 11.30—40h.

The reading of the barometer fell from 997.3 mbs. at beginning of week to 991.3 mbs. at 15.35h. on 4th, rose to 1016.6 mbs. at 22.10h. on 7th, and then fell to 1010.0 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ending 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included.*

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 17th May, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1952	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—under 1 year.	1-4 years.	5-14 years.	15-24 years.	25-34 years.	35-44 years.	45-54 years.	55-64 years.	65-74 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361-2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 17th May, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page 2*).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

TABLE VII.—Air Temperature, Rainfall and Sunshine in the week ended 17th May, 1952. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

Daily Notes

Sunday—Generally cloudy, becoming fair to fine in late evening. Showers, heavy at times, until late afternoon. Fresh wind 07.30h.—08.45h. (S—SW), 09h.—09.05h., 09.25h.—14.55h., 15.35h. (SW), 16.30h. (WSW).

Monday—Fine to fair early, then generally cloudy, becoming fair in evening. Light showers in morning and early afternoon; a moderate shower at mid-day. Dew morning and evening.

Tuesday—Fair until early afternoon, then cloudy. Dew morning and evening.

Wednesday—Generally cloudy. Intermittent light drizzle in morning. Dew morning and evening.

Thursday—Cloudy until early afternoon, then fair, becoming cloudless.

Friday—Fine all day. Mist in early morning.

Saturday—Fine in morning, becoming fair most of afternoon and evening, except for cloudy period around 18h. Shallow mist in early morning.

The reading of the barometer fell from 1010.1 mbs. at beginning of week to 1007.6 mbs. at 06.05h. on 11th, rose to 1024.0 mbs. at 10h. on 14th, fell to 1019.6 mbs. at 17.25h. on 15th, rose to 1025.2 mbs. at 23.10h. on 16th, and fell to 1020.9 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The sickness and incapacity rates shown in Table V are based on the results of sample interviews carried out for the Registrar General by the Social Survey of the Central Office of Information. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 24th May, 1952, with totals from the first week of the year to date. **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 24th May, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

Late returns for week ended 17th May :—

Holywell R.D. (Flint) ..	–	–	–	–	1	

† Nil returns are not shown. Districts for which no return has been received are as follows:—

‡ Returns still outstanding for week ended 17th May, 1952:—

Urban Districts:—Crediton (Devon), Lynton (Devon), Knighton (Radnor), Presteign (Radnor).

Rural Districts:—Crediton (Devon), Newtown and Llanidloes (Montgomery), Knighton (Radnor).

TABLE V.—Sickness Rates and Days of Incapacity, Monthly Rates per 100 persons interviewed. } England and Wales.

(Based on the results of interviews carried out for the Registrar General by the Social Survey of the Central Office of Information).

	Sickness Rate (Persons[1] per month)					Sickness prevalence rate (Illnesses[2] per month)			Incapacity rate (Days[3] per month)				
	Total	Age 21–64		Age 65 & over		Total	Minor & ill-defined	More serious	Total	Age 21–64		Age 65 & over	
		Males	Females	Males	Females					Males	Females	Males	Females
1949 4th Quarter,	71	63	73	75	86	151	135	16	125	98	99	225	302
1950 4th Quarter	72	65	74	79	89	151	131	20	110	99	96	182	176
1951 1st Quarter	75	69	76	85	90	163	134	29	190	167	177	295	271
2nd ,,	69	61	70	78	88	143	125	18	83	86	68	126	112
3rd ,,	68	61	70	79	86	142	126	16	70	80	58	88	73
4th ,,	72	65	72	82	87	151	127	25	101	99	90	122	143
1951 November	71	65	71	82	87	148	124	24	103	108	85	142	129
December	73	65	74	83	87	156	128	27	110	103	99	137	167
1952 January	74	67	76	83	89	160	132	28	137	119	112	187	279

(1) Number of persons reporting some illness or injury. (2) Total number of illnesses and injuries reported.
(3) Number of days of incapacity reported.

As an economy measure no interviews have been held for the Survey of Sickness since March, 1952. Figures will therefore not be available for months subsequent to January, 1952, and this table will be suspended from Weekly Return No. 22 (week ended 31st May).

TABLE VI.—New claims to (a) sickness benefit under the National Insurance Act and (b) injury benefit under the National Insurance (Industrial Injuries) Act. } England and Wales, Standard Regions.

(Figures to nearest hundred).

(Supplied by the Ministry of National Insurance).

Period	England and Wales	Standard Regions										
		Northern	East and West Ridings	North Western	North Midland	Midland	Eastern	London and South Eastern		Southern	South Western	Wales
								London & Middx.	Remainder			
1	2	3	4	5	6	7	8	9	10	11	12	13
(a) New claims to sickness benefit.												
Week ended:—												
May 20	94,800	8,200	9,600	15,200	7,400	10,000	5,400	13,000	9,000	4,300	5,700	7,100
May 13	100,100	8,700	10,100	16,100	7,700	10,300	5,800	14,100	9,600	4,600	5,700	7,500

Weekly Averages:-												
1951 May	95,800	8,400	9,700	16,600	7,300	9,700	5,300	13,000	9,000	4,200	5,500	7,200
1952 Apr.	110,900	8,600	11,400	19,200	8,600	10,800	6,300	15,800	11,200	4,800	6,300	7,900
1951 Apr.	110,600	9,400	11,500	19,200	8,500	11,000	6,200	15,100	10,600	4,700	6,500	7,900
(b) New claims to injury benefit.												
Week ended:—												
May 20	13,200	2,100	2,200	1,600	1,400	1,200	500	900	900	400	500	1,600

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

TABLE VII.—Air Temperature, Rainfall and Sunshine in the week ended 24th May, 1952. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

(Supplied by the Director of the Meteorological Office).

Daily Notes

Sunday—Fair most of day, but fine around mid-day. A light shower in evening; distant lightning observed at 20.39h. Shallow fog in early morning. Dew in morning.

Monday—Fair to cloudy in morning, then cloudy. A heavy thunderstorm in late afternoon, passing SE—SW, and then N—NE. A light shower late. Shallow fog in early morning. Fresh wind 16.05—25h. (S), 17.15—25h. (SW). Dew in morning.

Tuesday—Cloudy, becoming fair to fine in evening. A light shower in morning. A period of continuous heavy rain around mid-day. Intermittent light rain in afternoon. Fresh east wind 20h.—20.15h., 20.30h.—21.15h., 21.25h.—21.40h.

Wednesday—Fine, except for a period around 06h., when fair. Dew in morning.

Thursday—Fine in morning, becoming fair in afternoon; fine in evening. Dew in morning.

Friday—Fine. Dew in morning.

Saturday—Fine early, then fair most of day, except for short periods in afternoon and evening, when cloudy. A light shower in evening.

The reading of the barometer fell from 1020.9 mbs. at beginning of week to 1016.2 mbs. at 17.30h. on 18th, and rose to 1034.7 mbs. at 23h. on 23rd, fell to 1030.0 mbs. at 17h. on 24th, rose to 1030.7 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table VI) are supplied by the Ministry of National Insurance. Meteorological data (Tables VII and VIII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

ABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

ABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 31st May, 1952.

Great Towns, Greater London and four Scottish and Irish Towns.

(*See notes on page 2*).

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 31st May, 1952, with totals from the first week of the year to date. **London.**

St. Thomas R.D. (Devon)	2	–	–	1	–	N.1
Mucknall U.D. (Notts.)	–	4	–	3	1	–

† Nil returns are not shown. Districts for which no return has been received are as follows:—Fowey.

‡ Returns still outstanding for week ended 24th May, 1952:—

Urban Districts:—Lynton (Devon), Oadby (Leicester), Wells M.B. (Somerset), Prestatyn (Flint), Presteign (Radnor).

Rural Districts:—Samford (Suffolk, East).

TABLE V.—Sickness Rates and Days of Incapacity, Monthly Rates per 100 persons interviewed. } **England and Wales.**

As an economy measure no interviews have been held for the Survey of Sickness since March, 1952. Figures are therefore not available for months subsequent to January, 1952, and the above mentioned table has been suspended. Additional information derived from the Survey of Sickness will, however, be published in the Registrar General's Annual Reviews and Quarterly Returns in due course.

TABLE VI.—New claims to (a) sickness benefit under the National Insurance Act and (b) injury benefit under the National Insurance (Industrial Injuries) Act. } **England and Wales, Standard Regions.**

(Figures to nearest hundred).

(Supplied by the Ministry of National Insurance).

Period	England and Wales	Standard Regions										
		Northern	East and West Ridings	North Western	North Midland	Midland	Eastern	London and South Eastern		Southern	South Western	Wales
								London & Middx.	Remainder			
1	2	3	4	5	6	7	8	9	10	11	12	13
(a) New claims to sickness benefit.												
Week ended:—												
May 27	89,400	7,600	9,000	14,400	7,100	9,600	4,900	12,200	8,500	4,000	5,400	6,600
May 20	94,800	8,200	9,600	15,200	7,400	10,000	5,400	13,000	9,000	4,300	5,700	7,100
May 13	100,100	8,700	10,100	16,100	7,700	10,300	5,800	14,100	9,600	4,600	5,700	7,500
May 6	105,100	8,600	10,600	17,000	8,100	10,800	5,900	15,100	10,500	4,700	6,100	7,700
Weekly Averages:-												
1951 May	95,800	8,400	9,700	16,600	7,300	9,700	5,300	13,000	9,000	4,200	5,500	7,200
1952 Apr.	110,900	8,600	11,400	19,200	8,600	10,800	6,300	15,800	11,200	4,800	6,300	7,900
1951 Apr.	110,600	9,400	11,500	19,200	8,500	11,000	6,200	15,100	10,600	4,700	6,500	7,900
(b) New claims to injury benefit.												
Week ended:—												
May 27	13,400	2,000	2,200	1,600	1,400	1,300	400	1,000	800	300	500	1,700

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of " employed persons " under the main scheme.

TABLE VII.—Air Temperature, Rainfall and Sunshine in the week ended 31st May, 1952. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

(Supplied by the Director of the Meteorological Office).

Daily Notes

Sunday—Fine in morning, fair to cloudy for a time in afternoon, fine to fair in evening. Shallow fog in early morning. Dew in morning.

Monday—Fair to cloudless in morning; cloudy from late morning until mid-evening, then fair. Dew in morning.

Tuesday—Fair early, then generally cloudy.

Wednesday—Cloudy, becoming fair late evening.

Thursday—Generally cloudy; short intervals when fair.

Friday—Cloudy. Intermittent light drizzle in morning. A moderate shower late evening. Fresh wind 12.20—45h. (SW). 13.25h.—17h. (SW—WSW).

Saturday—Cloudy. A moderate shower early; moderate to heavy rain around mid-day. Light showers in afternoon; light drizzle, becoming intermittent, in evening.

The reading of the barometer fell from 1030.7 mbs. at beginning of week to 1010.4 mbs. at 16.50h. on 28th, rose to 1016.0 mbs. at 03h. on 30th, fell to 1005.8 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

BLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

BLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 7th June, 1952.

Great Towns, Greater London and four Scottish and Irish Towns.

(*See notes on page 2*).

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 7th June, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1952	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—under 1 year.	1-4 years.	5-14 years.	15-24 years.	25-34 years.	35-44 years.	45-54 years.	55-64 years.	65-74 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 7th June, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page 2*).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Cloudy, becoming fair in late afternoon, fine in evening. A heavy shower 01.35h.; intermittent light rain and drizzle in morning; heavy rain 07h., thick drizzle 08.30—40h. A moderate shower 12.45h., gusts more than 38 mph :— 15.15—25h., 15.50h., 16.05h., 16.10h., 16.30—35h., 1655h.—1730h., 18.30h. (SW).

Monday—Fine at first, then fair to cloudy, fine late. Moderate to heavy rain early; light showers in morning, heavy in afternoon and early evening, and violent, with hail, at 14h. and 16.25h. Thunder heard at 14.14h. (E), 14.16h., 14.22h. (distant), 16.12h. (WSW)., gusts more than 38 mph. 00.10h.—02.40h. (SSW), 14h. (WSW), 16.20h. (SW), 18.25h. (W).

Tuesday—Fine at first, then fair most of day. A light shower in evening.

Wednesday—Fair to fine at first, then generally cloudy.

Thursday—Cloudy. Fresh wind 09.45h.—14.30h. (SSW), 15.30—50h. (SW).

Friday—Generally cloudy, but fair for a time in morning. A light shower and intermittent light rain in morning. There were thunderstorms in afternoon, with heavy rain 13.20h.—14h., and a violent shower at 16h. Light and moderate rain in evening.

Saturday—Generally cloudy, but fair for a time in morning; becoming fair in evening.

The reading of the barometer fell from 1005.8 mbs. at beginning of week to 1004.5 mbs. at 08.10h. on 1st., rose to 1030.3 mbs. at 07h. on 4th., fell to 1010.1 mbs. at 15.45h. on 6th., rose to 1022.0 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 14th June, 1952. } **Great Towns, Greater London and four Scottish and Irish Towns.**

(*See notes on page 2*).

TOWNS	Live Births.	Stillbirths.	Deaths (excluding Stillbirths).	Deaths of Infants under 1 year of Age.	Deaths from: Typhoid and Paratyphoid fevers.	Whooping cough.	Diphtheria.	Tuberculosis (all forms).	Influenza. §	Acute poliomyelitis.	Pneumonia.	Enteritis and diarrhoea under 2 years.	Dysentery.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 14th June, 1952, with totals from the first week of the year to date. **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 14th June, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute polio-myelitis: Paralytic E	Acute polio-myelitis: Non-paralytic F	Acute enceph-alitis: Infective G	Acute enceph-alitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 14th June, 1952. } Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Daily Notes

Sunday—Fair to fine at first, becoming cloudy. Continuous light to moderate rain from late morning until 22h. Dew in morning.

Monday—Generally cloudy, becoming fair in evening. Moderate to light rain early. Dew in evening.

Tuesday—Fair to fine at first; overcast with fog, thick 05.45—06.30h., in early morning; then fair becoming cloudy; air to fine in evening. Dew in morning.

Wednesday—Fine in early morning, then fair, becoming fine again in evening. Dew in morning and evening.

Thursday—Fine at first, then generally fair, becoming cloudy late. Dew in morning.

Friday—Cloudy in morning becoming partly cloudy in early afternoon. Continuous moderate to heavy rain in early morning. Light and heavy showers in late evening.

Saturday—Generally cloudy. A heavy thunderstorm occurred in early morning.

The reading of the barometer fell from 1022.0 mbs. at beginning of week to 1018.5 mbs. at 03.55h. on 9th and rose to 1023.1 mbs. at 04.30h. on 10th, then fell to 1008.9 mbs. at 04.10h. on 14th, and rose to 1011.6 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12 ,13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 21st June, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 21st June, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page 2*).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

1951 May	95,800	8,400	9,700	16,600	7,300	9,700	5,300	13,000	9,000	4,200	5,500	7,220
(b) New claims to injury benefit.												
Week ended:—												
June 17	12,200	1,900	2,000	1,300	1,400	1,100	400	900	800	300	500	1,660

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 21st June, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

(Supplied by the Director of the Meteorological Office).

Daily Notes

Sunday—Cloudy, with periods of heavy rain in morning.

Monday—Fine at first, becoming fair, then cloudy in evening. Dew in evening.

Tuesday—Cloudy. Intermittent light rain in late evening.

Wednesday—Cloudy in morning, then fair for rest of day. Continuous light to heavy rain in morning, followed by a slight shower. Fresh wind 10.30—19.30h. (W—WSW).

Thursday—Fair at first, then cloudy for rest of day, except for a short period in evening, when fair.

Friday—Generally cloudy, becoming fair in evening. Fresh wind 09.05—09.20h., 10.50—11.05h., 11.45h. (W).

Saturday—Cloudy. A slight shower in morning; moderate to light rain late evening. Fresh wind 09.40—50h. 11.50—12h. (W), 20.50h., 21.10h., 21.20h., 22.30—50h., 23.15—25h. (SW).

The reading of the barometer fell from 1011.6 mbs. at beginning of week to 1010.0 mbs. at 05.55h. on 15th, rose to 1014.7 mbs. at 14.10h. on 16th, fell to 1004.8 mbs. at 04h. on 18th, rose to 1022.5 mbs. at 23.05h. on 19th, and fell to 1015.6 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 28th June, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 28th June, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 28th June, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Daily Notes

Sunday—Generally cloudy, becoming fair in evening. Intermittent light drizzle in morning; light and moderate showers n afternoon. Fresh wind 01.05h.—05h. (SW), 09.30h., 11.05h.—11.15h. (WSW).

Monday—Fair to fine early; cloudy around 09h., then fair until evening, when cloudy. Fresh wind 07.50h.—08.10h. NNW). Dew in morning.

Tuesday—Cloudy at first, then fair in morning and afternoon, except for a period around mid-day, when cloudy; ecoming cloudy in evening.

Wednesday—Cloudy in morning, then fair, becoming fine late.

Thursday—Fair at first, then cloudy until early afternoon, becoming fair, except for a cloudy period in early evening.

Friday—Fair to cloudy early, then fair, except for a cloudy period around mid-day; fine in evening.

Saturday—Fine until mid-afternoon, then fair, becoming cloudy in evening.

The reading of the barometer fell from 1015.7 mbs. at beginning of week to 1011.5 mbs. at 07.40h. on 22nd, rose to 1024.5 mbs. at 08.55h. on 24th, fell to 1018.1 mbs. at 17.25h. on 26th, rose to 1020.8 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included.*

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.

Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 5th July, 1952.

Great Towns, Greater London and four Scottish and Irish Towns.

(*See notes on page 2*).
